Vijverfolie is an Effective Way of Retaining Water in Organic Farming by [Aelex Camron](#)

Article published on July 10th 2012 | [Shopping](#)

Organic farming is the need of the hour. It is a process which makes use of inartificial (natural) practices to achieve a good crop. This is done while keeping the natural environment in mind. Efforts are made not to harm the environment in the process of farming. On an organic farm, each technique is used very scientifically and carefully. The farmer uses a wide range of organic methods and at the same time allows them to work together for the maximum benefit. Thuis kweken is by far the best technique for performing organic farming.

Crop rotation is one of the more important techniques, used in the process of organic farming. As the name suggests, crop rotation means to keep the fertility of the soil in check by rotating the crops which are grown on the same. Crop rotation also helps natural predators to survive on the Thuis Kweken farm by providing distinct habitats and sources of food for them.

Water is one of the most important resources used in farming. No agricultural activity can be complete without water. Equivalent steps should be taken to preserve water. Vijverfolie is one way of retaining water on the fields. However, preventive steps should be taken to even protect liner. It should be kept away from any sharp substances or substances having sharp edges such as stones to avoid any damage to the material.

Mulching is also an important technique used in Organic Farming. It is nothing but a process under which the land is covered with a layer of loose material. Such material could include anything from leaves to crop residues to manure to straw to dry grass. Green vegetation is not normally used as it can take a long time to decompose and can attract pests and fungal diseases. Vloerventilator can be made use of effectively, preventing the excess heat to penetrate below the earth and protect the top soil as well.

Vloerventilator is generally small in size. Although the height cannot be increased, it can be placed on a higher platform to ensure flexibility. The speed of the circulation of air can also be adjusted as per the requirement. Various different kinds of ventilator are available in the market and can be made use of in the process of organic farming as well.

There is an urgent need to educate the next generation about the importance and need of organic farming. This is only possible when the families themselves take the initiative to carry out organic farming on a small scale within their premises or elsewhere. Technology has made it possible that such agricultural activities can also be carried out within any defined surrounding. The advantages of organic farming are numerous, right from production of healthy products to protecting the environment. It does not comprise of any factor which would discourage an individual from performing such activities. Hollands Glorie is a one stop solution for acquiring all such hardware and equipments to promote the activities of organic farming.
