How Federation Service Software Support 2-Factor ADFS by [Claire Hayse](#)

Article published on June 29th 2012 | [Software](#)

Many organizations are using multiple methods for authentication purposes on ADFS in order for them to gain SSO or single sign on functionalities in the cloud and corporate networks. Supplementary federation service item can assistance 2-factor ADFS for a a lot more centralized authentication and auditing of ADFS in the environment.

This system can give you with the potential of extending AD FS or Active Directory Federation Service that can make the two-factor ADFS authentication an effective and effortless thing to accomplish. Federation service is said to have restricted features and a complementary plan can supply it with skills that may help organizations acquire an effective and thriving integration and authentication of ADFS.

By using programs like this, organizations are give with a a lot more excellent solution of keeping their Active Directory secured against denial of service AD FS in which it really is generally vulnerable to. Implementing federation can truly leave your ADFS prone to denial of service attack which can give concerns on security and other difficulties to the organization. But risks like this can be prevented by working with the ideal complementary software program for ADFS in your environment.

Aside from supporting two-factor authentication of ADFS and preventing DoS attacks, you will discover also a great deal of other items this computer software can offer. As an example, it can authenticate customers no matter where their place may possibly be, whether or not in LDAP databases and directories. The current ADFS deployment might be leveraged to allow the customers to create to authenticate the retailers of data from the AD and other sources.

Organizations are then able to acquire a far more effective tactic in supporting multiple authentication methods with all the deployment of ADFS. Using the help of this system, a company is in a position to gain capabilities like performing active expansion of claim within a very simple manner devoid of the need to custom code by using a simple interface.

There are a lot of vendors of this product these days to cater to the escalating demands of organizations for goods like this. If you need to produce confident you are selecting the ideal federation service plan, you ought to obtain one which is equipped with essential features like DoS AD FS, authentication and support for two factor ADFS.
