Useful Facts about Printronix P7000 Printers by [James Blee](#)

Article published on December 23rd 2011 | [Technology](#)

One of the most famous names in the field of dot matrix and laser printers is Printronix. It has created a huge name for itself for providing printing solutions to large offices and business organizations. The main reasons that these printers are so famous in the industrial sectors are their various activities, producing the desired results within the stipulated time and cutting cost to a large extent. These printers have an indirect effect on your race towards success defeating your competitors. Recently, the printronix printers have come up with a new printer named Printronix P7000..

The Printronix P7000 printers have evolved a lot from the Printronix 5000 varieties. There is huge difference between these two varieties. The Printronix P7000 printers are more dependable than the previous ones. The circuitry is provided with improved controller options to give it greater protection. Plus there are various other features related to the mechanical spheres. Thus the service and maintenance cost is decreased considerably and increases the longevity of the printers. The Printronix P7000 printers come in two distinct shapes. They are the open pedestal and the cabinet shaped ones. They have augmented ribbon facilities in them with around 350% for the pedestal ones and around 200-350% for the cabinet varieties. The other features of the printronix p7000 printers that put them ahead of the Printronix 5000 varieties are the absence of chic exit points and pointed alignments. What is new in the new ones is the presence of slightly angular alignments at the exit points. The reason for this modification is that it allows wide forms of 17 inches can be easily printed and also at a great speed. All these reasons make the Printronix P7000 the most sought after ones in the industries.
