Windows or Linux Hosting: Which one's better? [Ajay Kumar](#)

Article published on April 11th 2012 | [Web Hosting](#)

Any person that aims to publish any type of data on the Internet needs to first have a website. There are several things that a user needs when he thinks of setting up a website. There are various options available today from which he needs to pick the most apt option. The first thing that you as a user should do is make a list of your requirements.

One of the important decisions a user needs to make is what type of web hosting does he need. Depending upon the type of operating system one uses and the type of application one plans to use in the website, the user can either opt for a Windows Hosting plan or a Linux Web Hosting plan.

Windows Hosting is a website hosting solution that a user must opt for if he is seeking to use Windows applications like Active Server Pages (ASP) or if he is planning to set up the website with Microsoft FrontPage. If the user is aiming to develop the website with .NET, MS Index Server or Visual Basic scripts, this hosting solution is considered as a better option. Cost-wise this hosting solution is known to be a little expensive, as it has some licensing costs. In general, this hosting service is most suited for a user who thinks of integrating Microsoft specific products in his website. Due to its global acceptance Windows Hosting has also gained a lot of popularity in India.

Linux Hosting is also among the most renowned website hosting solutions available today. In fact it is said to be the most cost-effective choices for website hosting available in the market today. As we all know it is open source software, this means anybody can download it very easily. It is also commonly referred to as LAMP server-software combination - Linux, Apache, MySQL and PHP/Perl/Python. Linux O/S is considered to be highly reliable, stable, robust and efficient in nature. Linux Web Hosting is generally recommended to user who are starting up with their new websites and do not expect much traffic on it. The biggest benefit of this hosting solution is the fact that its cost is reduced to only maintenance of servers.

Both these plans come with its own distinct advantages and make it easier for users to integrate them. The user is always recommended to clearly assess his hosting requirements before picking any type of hosting plan.
